Details of Project Supervisor, Co-supervisor, Advisors, and Clients

Project Supervisor (Academic Staff of UCSC):

Name of the supervisor: Dr. A.P. Sayakkara

Signature of the supervisor: 

Date: 27/04/2025

Project Co-Supervisor (Assigned by Course Coordinator):

Name of the co-supervisor: Mr. Thulasigaran Srimurugathas

Signature of the co-supervisor: 

Date: 27/04/2025

1. Introduction

UniQuest is a new web application designed to improve how university students find part-time jobs and internships. It offers easy-to-use features to make finding these opportunities more efficient, reliable, and convenient. By putting all the information in one place and making the process simpler, UniQuest helps both students and organizations. As university students ourselves, we created this project because we know from experience the common problems students face when looking for these opportunities.

1.1. Domain Description

The demand for part-time jobs and internships among university students has been increasing steadily, especially in Sri Lanka, where many students need to balance their academic commitments with financial independence. University students often face challenges in finding reliable, relevant, and conveniently located job opportunities that align with their academic schedules. Many existing platforms offer job listings, but these are often not tailored to the specific needs of students. They lack specialized filters for part-time roles, internship opportunities, and relevant fields, making the search process inefficient.

On the other hand, organizations and companies that offer part-time jobs and internships face difficulties in reaching the right student candidates. They may struggle with managing applications, filtering out irrelevant candidates, and promoting opportunities in a way that is accessible to students.

UniQuest addresses these challenges by providing a dedicated platform where university students can easily find part-time job and internship opportunities tailored to their academic needs. This platform aims to centralize all available opportunities in one place, offering advanced search features and notifications to help students find roles that best match their skills and interests. It also provides a seamless registration system for students to apply directly for positions, improving the application process for both students and employers. Additionally, UniQuest allows students to create personalized profiles to increase their chances of matching with suitable employers.

While there are existing platforms for job listings, they are not optimized for the student demographic, making it difficult for students to find part-time work that fits their schedules and skill sets. UniQuest fills this gap by offering a more student-focused solution that not only lists opportunities but also integrates features for job alerts, application tracking, and profile management.

1.2. Current System & its Limitations

The current way that university students find part-time jobs and internships involves using various job listing platforms, and word-of-mouth. Students typically search for opportunities through social media or job portals. After finding a potential job or internship, students may apply by sending emails or filling out forms, but the process is often scattered and inefficient. Employers and organizations also face challenges when it comes to reaching students effectively and managing applications.

However, these current systems for finding part-time jobs and internships suffer from several limitations:

- 1. Lack of Centralized Platform:** There is no single platform that consolidates all available part-time job and internship opportunities tailored specifically for university students.
- 2. Limited Search Filters:** Existing platforms often provide very basic search filters, making it difficult for students to find the most relevant opportunities based on job location, Title or Salary Range.
- 3. Infrequent Updates:** Many job and internship platforms are not regularly updated, meaning students may miss out on new opportunities or have to sift through outdated listings.
- 4. No customized fields when applying to an opportunity:** Unlike other job providing platforms our platform provide companies to customize the required fields when posting a job.
- 5. Absence of Notifications:** Students may not receive timely notifications about new opportunities, which can lead to missed chances or delays in applying.
- 6. No proper messaging system:** UniQuest provides a messaging system to communicate with companies.and to communicate between admin.
- 7. Security:** protect student anonymity by use anonymous names for studentst when reviewing company.
- 8.**We focused for main functionalities so no separate mobile application interfaces.

UniQuest seeks to address these limitations by offering a platform where all part-time job and internship opportunities are centralized, easily accessible, and specifically designed to meet the needs of university students.

1.3. Process Re-engineered

1.3.1. Based on Project Proposal Feedback:

- **Enhancement of Business Processes:**
 - Expanded processes for Students, Companies, Verification Team, and Admin users.
 - Added important features like **payment, analytics, report generation...etc**
- **Scope Refinement:**
 - Removed the competition section to strictly focus on part-time jobs and internships.
- **Expected Outcome:**
 - A comprehensive, job-focused platform for university students and service providers.

1.3.1. Based on the Interim Review Feedback:

- **Verification Workflow Strengthened:**
- **Complaint Management:**
 - Students can **make complaints** with **description and proof files**.
 - Admins **handle complaints** by reviewing and taking necessary actions.
- **Trending Companies Logic:**
 - Companies with **5+ positive reviews (last 7 days)** are highlighted.
 - Only ratings **4 stars and above** are counted.
 - Top 30 companies are selected dynamically based on **latest authentic reviews**.
- **Functional Expansion:**
 - All major workflows like **Job Management, Student-Company Communication, Notifications, Reporting, and Analytics** were implemented successfully.

1.4. Goals and Objectives

1.4.1. System Goals

The goal of UniQuest is to create a fully functional, user-friendly web-based platform where university students and professionals can easily find part-time jobs and internships that align with their qualifications and schedules. Employers will be able to efficiently advertise their opportunities and manage the application process, making the system mutually beneficial for both students and employers.

1.4.2. Objectives

- Provide a convenient and centralized platform for students and companies to search for part-time jobs and internships.
- Allow users to filter job listings based on criteria such as location, job type and salary range.
- Enable students and companies to create profiles and enable students to apply to jobs showcasing their skills, experiences.
- Allow students, companies, verification team members and Admin to receive notifications based on their activities.
- Create a transparent review system where students can rate and review their past job or internship experiences and also protect their anonymity by using anonymous names for students.

1.5. Assumptions

- **Student Verification:** All students will have a valid university email and student ID to register and access the platform.

2. Project Feasibility

2.1. Technical Feasibility

The technical feasibility focuses on implementing the project with the available hardware, software, and technical skills.

For the implementation of the project, we use HTML, CSS, JavaScript, and PHP. The team members are familiar with these technologies and are currently in the learning phase. Large online support communities and a wealth of guidance resources are available for reference. We use our personal devices for the hardware, and the software and tools are free for students or open source. We decided to host the web application on a cloud platform; hence, it can be accessed by any device.

Therefore, UniQuest is technically feasible as it can be implemented using the available technologies.

2.2. Legal & Ethical Feasibility

The main access to the application is restricted to verified users only, and the verification process includes obtaining additional documents to verify the signup. It helps to prevent scams, as only verified users can log in.

All the data received through this system will not be given to third-party companies, and all the data is restricted based on user roles. So it prevents unauthorized use.

2.3. Resource Feasibility

Resource feasibility focuses on the availability of resources to develop this project. To make this successful, we have to manage resources efficiently and productively.

The primary resource is human resources, as there are four members in the team, and each member's skills and capabilities are determined so that the project can be completed successfully.

The other main resource is the technical resources, which also have a main impact on the project's success. The technologies we used are mentioned in the technical section.

Therefore, UniQuest is feasible in terms of resources, as the team members can manage the required resources.

2.4. Schedule Feasibility

The schedule for this project spans from June to March, it covers all the necessary software development phases.

The group members will share the tasks equally and work together to complete them within the scheduled time in the project timeline. All the group members will work for a minimum of 8 hours per week on the project. So as there are 4 members in the group there will be 32 working hours per week. And it will be roughly 1150 work hours at the end of the project.

Therefore, the project schedule can be stated to be feasible as team members can complete the tasks according to the schedule.

2.5. Social Feasibility

A survey was conducted to determine the social feasibility of implementing the UniQuest system. There were a total of 43 anonymous responses: 5 from first-year undergraduates, 34 from second-year undergraduates, and 4 from third-year undergraduates.

According to the responses, 93% of students expressed a need for part-time jobs. Most of them use social media to find such jobs. Managing study costs and living expenses motivated most students to seek part-time employment.

Most students use social media and online job portals to find internship opportunities. Our platform will make it easier for students to find internships by providing all opportunities in one place. According to our survey, limited internship opportunities are the greatest problem for students when finding internships.

Job notifications are the most sought-after features among students. Most of them have given higher priority to internships these subtopics.

So by the survey, it is clear that most students need such a platform. Therefore, the web project is socially feasible.

Google form link - [click here](#).

The results of the survey can be viewed [here](#).

3. Requirements

3.1. Functional Requirements

3.1.1. User Authentication and Verification:

- Students log in with a university email and attach a scanned copy of their student ID or university acceptance letter.
- Provide authentication mechanisms (e.g., email verification, password reset).
- Allow students to update profiles with their educational background, skills, interests, and experiences.
- Companies sign up with any valid email address.

- Allow companies to create profiles detailing their available opportunities and contact information.
- A verification team & admin verifies all signups.

3.1.2. Job postings and job alerts:

- Allow organizations to post part-time job opportunities with details such as job descriptions, requirements, location, and deadlines.
- Provide advanced search filters (e.g., location, job title and salary Range) for students to find suitable jobs.
- Enable students to set up notifications based on their activities.
- Allow students to apply for jobs directly through the platform.

3.1.3. Part-time Job and Internship Findings:

- Students can search for part-time jobs, and internships.
- Users can search job and internship opportunities based on location and job Title.
- Employers can post job and internship openings.
- Notifications for new job postings and internship opportunities.

3.1.4. Rating and Feedback System:

- Allow students to rate and review their jobs and internships experiences with protect their anonymity.
- Provide a system for students to submit complaints and feedback about opportunities or service providers.

3.1.5. Bookmarking system:

- Allow students to bookmark job and internship opportunities and companies for later reference.
- Enable students to quickly apply for jobs directly from their bookmarks list.

3.1.6. User management:

- Admins and Verification Team can view, or deactivate student accounts.

- Students and Organizations can update their profiles, reset their passwords, and deactivate their accounts.
- Automatic inactivity detection to flag inactive accounts for review or removal.

3.1.7. Jobs management:

- A verification team and Admin reviews all job postings and they can verify job posting manually.
- Enable editing and updating of active job post for the only premium companies and allow editing and updating for all companies .

3.1.8. Complaint handling:

- Students and companies can submit complaints about platform misuse, job-related issues, or service experiences.
- Complaints can include descriptions, supporting documents, and screenshots.
- Complaints handling only allow can be by Admin.

3.1.9. Analytics and reports:

- Allow can download and view analytics to particular job for premium companies.
- Allow can download and view analytics about whole system for Admin.

3.1.10. View trending companies:

- View a list of trending companies based on the student reviews and ratings.

3.2. Quality Attributes Requirements

1. Usability:

- The system should be user-friendly with an intuitive interface.
- Provide clear instructions and help options for all user interactions.

2. Performance:

- The system should handle multiple simultaneous users without significant performance degradation.
- Ensure fast response times for searches and database queries.

3. Scalability:

- The system should be scalable to handle an increasing number of users and data entries.

4. Security:

- Secure user data with encryption and secure authentication mechanisms.

5. Reliability:

- Ensure high availability and reliability of the system with minimal downtime.
- Implement backup and recovery procedures to protect against data loss.

6. Maintainability:

- The system should be easy to maintain and update with new features and bug fixes.
- Provide comprehensive documentation for developers and administrators.

3.3. Actors, use cases and main functionalities.

1. University student

- Register, Login, Edit profile, Change password, Delete account.
- Search jobs, internships and companies.
- Set filters.
- Apply for jobs and internships.
- View application status.
- Review and rate companies.
- Make complaints about job postings.
- Receive notifications and alerts.
- Bookmark jobs, internships and companies.
- Communicate with service providers and Admin.
- View trending companies.

2. Company

- Register, Login, Edit profile, Change password, Delete account.
- Jobs and internship postings.
- Manage listings (Edit, delete posts).
- Application Management (Accept/reject applications).
- Make payments for premium features.
- Communicate with Students and Admin.
- Generate job reports.
- View analytics.

3. Verification Team

- Login, Change password, Delete account.
- Verify signups.
- Verify Job Postings.
- Active or ban user.
- Active or ban postings.
- View status (Jobs and users).
- Communicate with Admin

4. Admin

- Login.
- Create, view, update and delete verification team.
- Complaint handling.
- Student and company management.
- Generate reports related to revenue of the system.
- View analysis.
- Active or ban user.
- View status (Jobs and users).
- Communicate with companies students and verification team.

4. Proposed System's Architecture

Our system is made on with MVC architecture with a framework created by scratch from us.

4.1. Components and their functionalities

There are 3 main components in our system as models, views and controllers. Views display the frontend, models interact with database and controllers interact both with models and views.

1. Models

- **Purpose:** Handle data-related logic and interact directly with the database.
- **Functionalities:**
 1. Manage database queries for user accounts, job listings, applications, and reviews.
 2. Define relationships between entities such as students, companies, and job opportunities.

2. Views

- **Purpose:** Handle the presentation layer of the system.
- **Functionalities:**
 1. Display data received from controllers in a visually appealing manner.
 2. Adapt layouts for different roles.

3. Controllers

- **Purpose:** Act as the intermediary between the models and views.
- **Functionalities:**
 1. Process user requests and invoke the appropriate model methods.
 2. Retrieve data from models and send it to the views for display.
 3. Enforce application logic, such as verifying job postings or validating user inputs.

4.2. Component Interactions

1. User Interaction with Views:

- Students, companies, and administrators interact with the application through the user interface (views).
- For example, when a student searches for a job, the request is captured by the relevant view.

2. Request Handling by Controllers:

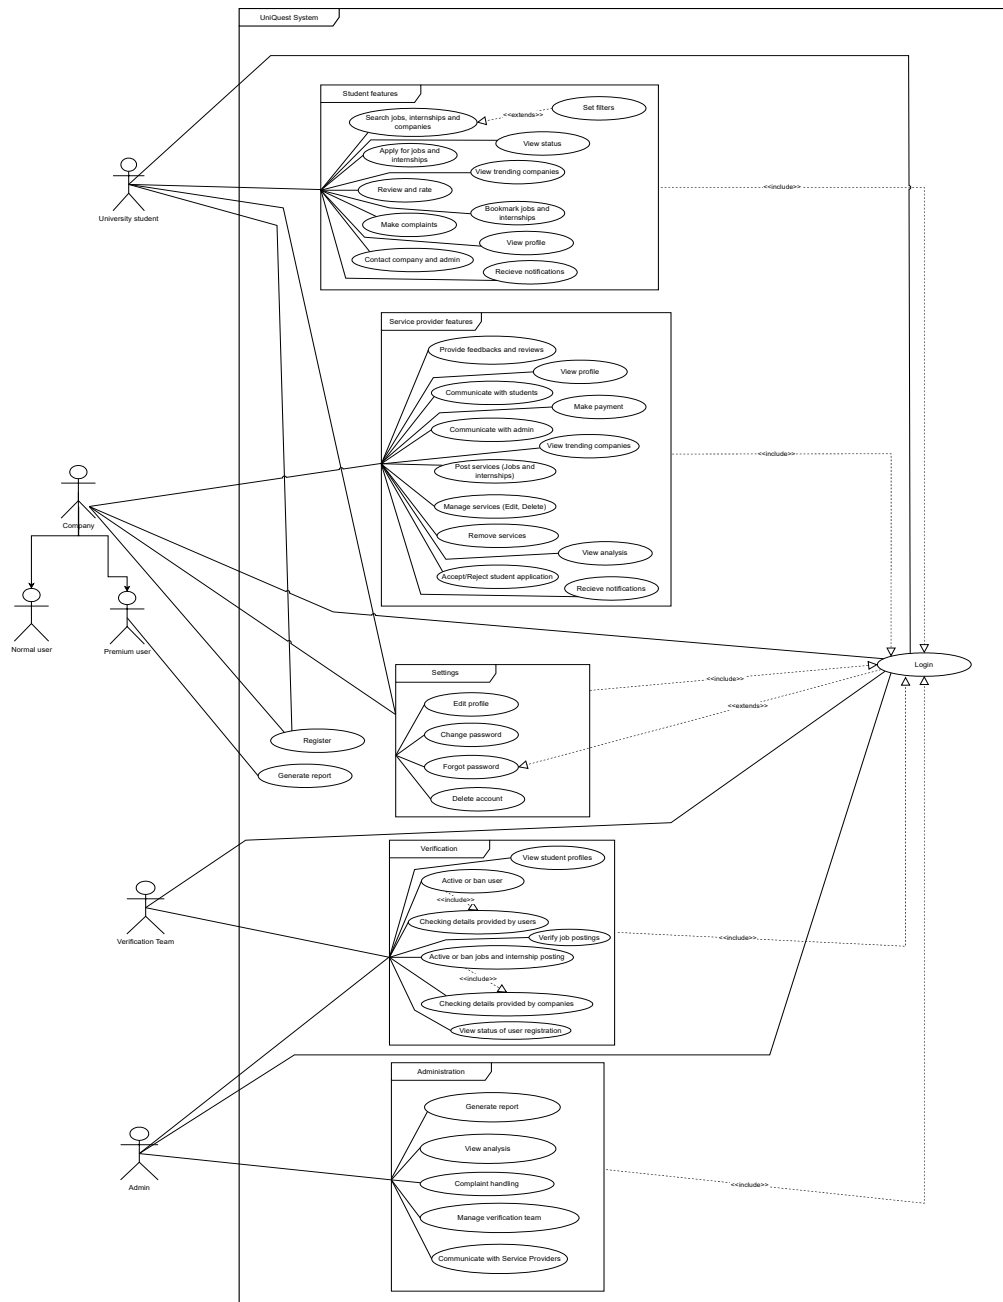

- The controller processes the user's request (e.g., job search) and determines the required data or action.
- It communicates with the corresponding model to retrieve or update data.

3. Data Handling by Models:

- The model performs database operations based on the controller's request.
- For example, if a company posts a job, the model inserts the job details into the database.

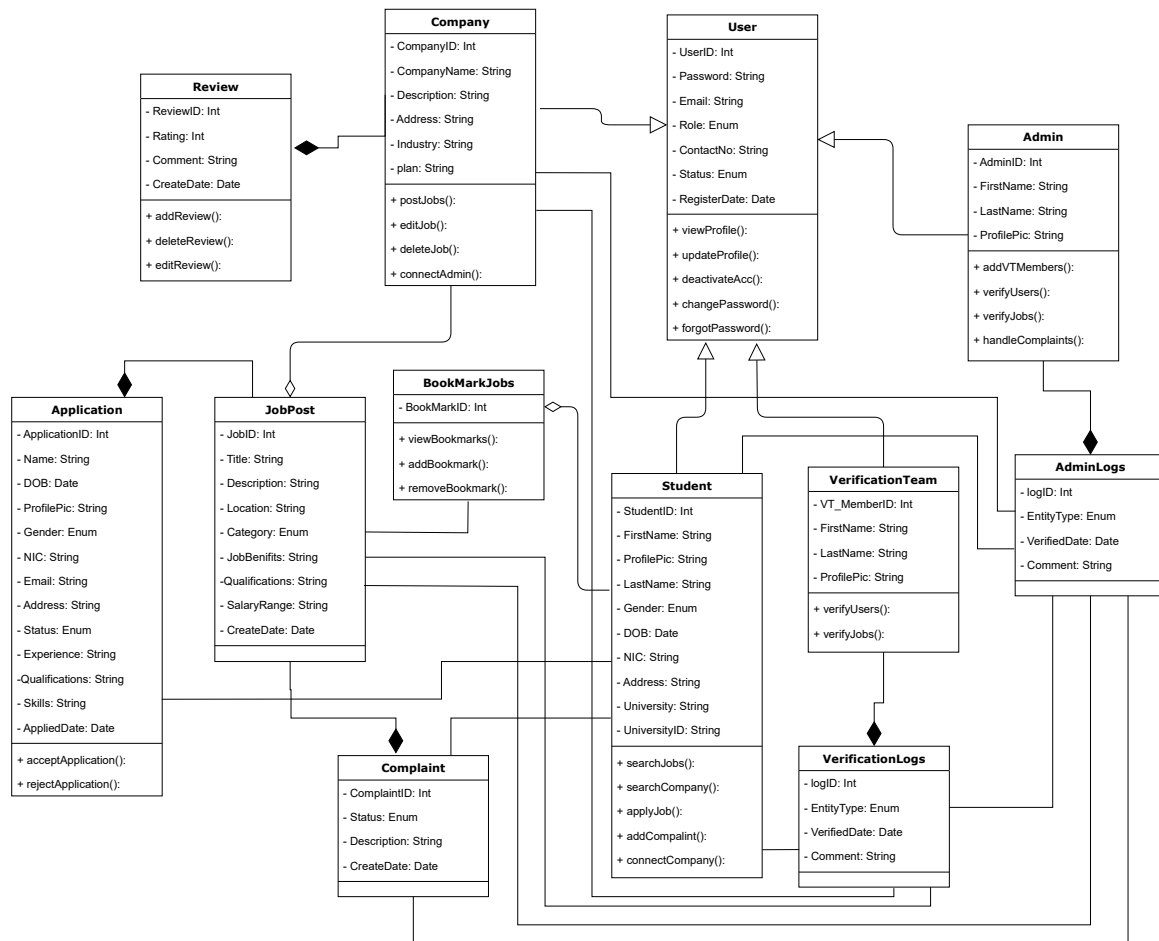

5. System Design Diagrams.

5.1. Use Case Diagram.

A high-resolution view of the use case diagram can be viewed [here](#).

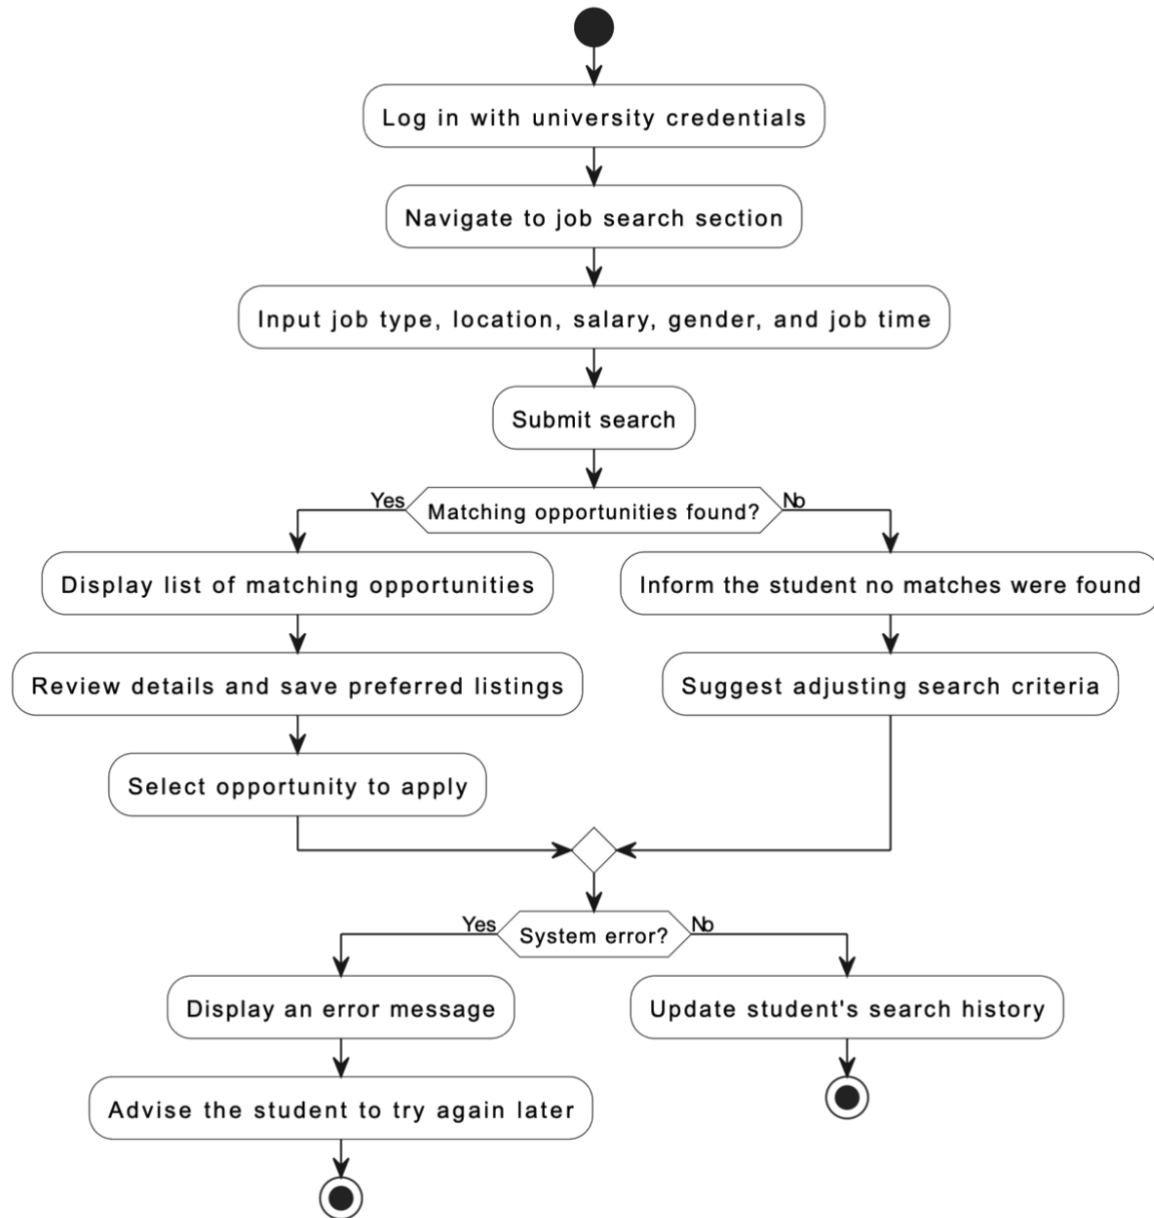

5.4. Class Diagram

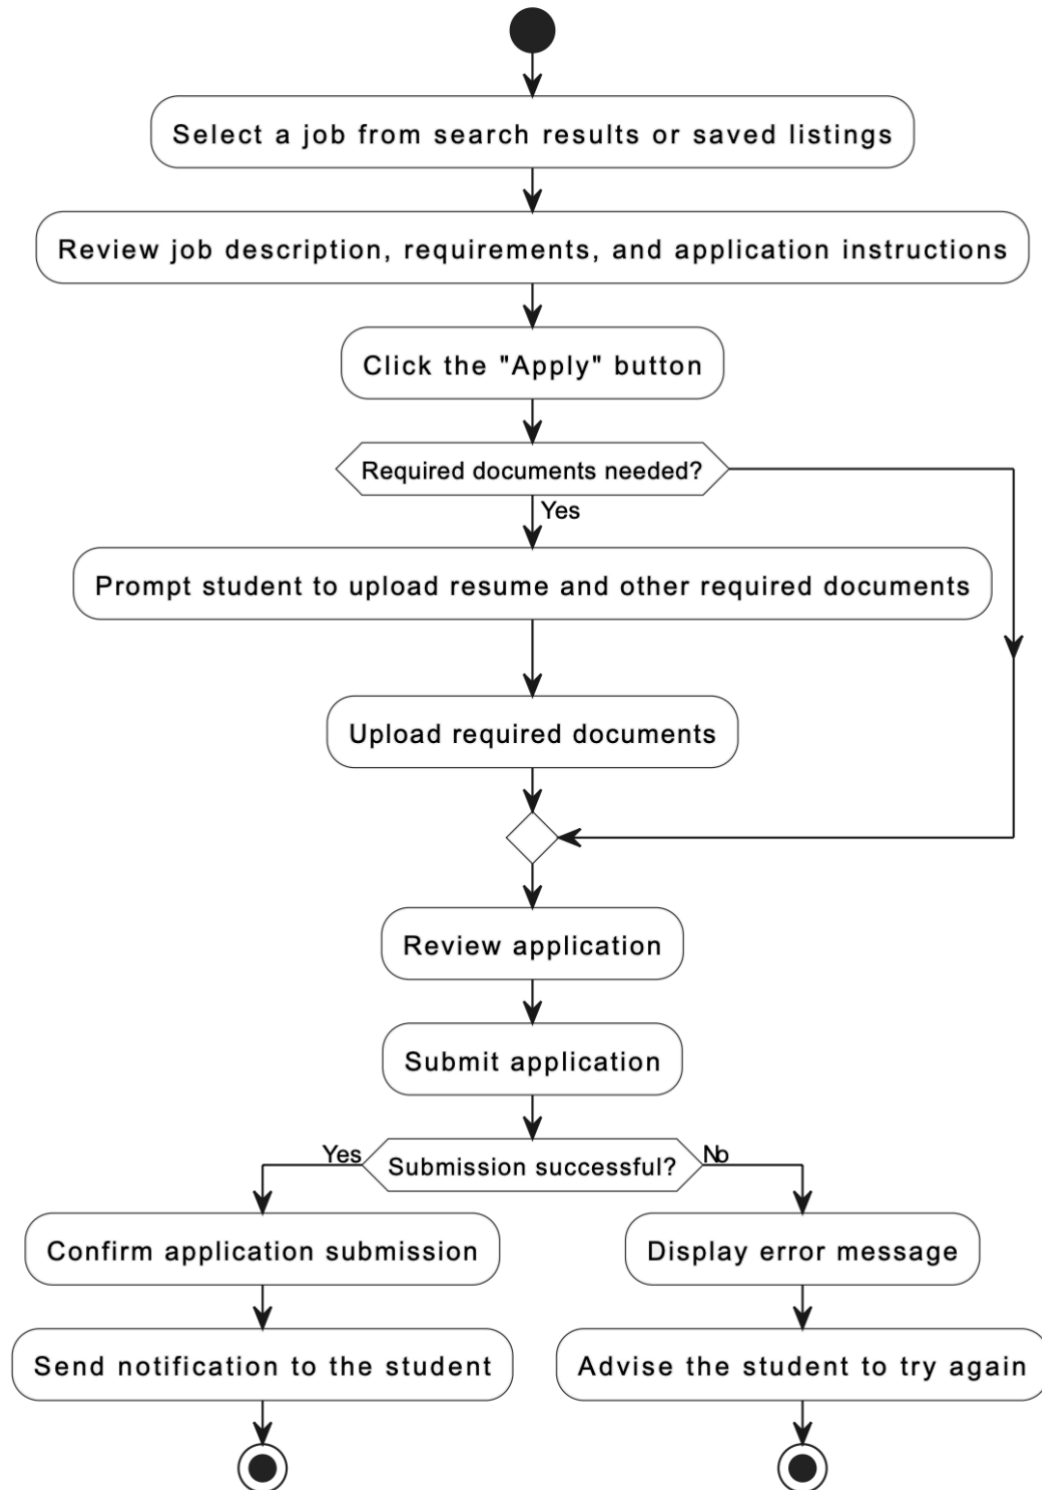

A high-resolution view of the EER diagram can be viewed [here](#).

Handle complaints

5. Completeness of the project

5.1. Functionalities completed

We have made significant progress in developing the UniQuest platform. Here's what we have achieved:

Student

1. Login
2. Logout
3. Register
4. Forgot password
5. Search jobs, internships & companies
6. Set filters
7. Sort posts
8. View, jobs and internship description
9. Apply for jobs and internships
10. Contact with company
11. Rate and Review company
12. Edit existing reviews
13. Delete reviews for companies
14. Anonymous reviews
15. Like and dislike reviews
16. View company details
17. Make complaint about a job posting
18. View application status
19. View application details
20. Saved posts
21. View trending companies
22. View profile
23. Edit profile
24. Deactivate account
25. Contact with admin
26. Receive notifications -> Messages from admin, company, new job postings
27. View notifications

Company

1. Register
2. Login and logout
3. Forgot password
4. Publish jobs
5. View pending/active/deactivate jobs
6. View jobs, companies and internships

7. View trending companies
8. Edit jobs
9. Edit active jobs for premium users
10. Deactivate job postings
11. Delete job postings
12. Search pending, active and deactivate jobs
13. Customize fields for job application form
14. Customize required fields for job application form
15. View application dashboard for job postings
16. View pending, offered and rejected applications for a particular job posting
17. Search pending, offered and rejected applications for a particular job posting
18. View student application form
19. View reviews
20. Like and dislike reviews
21. View analytics
22. Generate job report
23. Download report as pdf and csv file
24. Chat with students
25. Contact admin
26. Activate premium -> Professional and Enterprise plans
27. Premium features
28. View profile
29. Edit profile
30. Deactivate account
31. Receive notifications about ->
 - Job post approve and reject,
 - Messages from student and admin,
 - Job post publish
 - New applications for a job post
 - Warnings from admin (alert)

Admin

1. Login and Logout
2. Forgot password
3. View summary details in dashboard
4. View user details (of students, companies and verification team)
5. Add verification team member
6. Approve, reject (verify) user
7. Approve, reject (verify) jobs and internships
8. Activate, Deactivate user account
9. Send notifications to users with the reasons of deactivating
10. Search users
11. Search jobs
12. View jobs, internships and companies
13. View user status
14. View job status
15. View edited jobs

16. Complaint handling -> Get actions for complaints
17. Send messages to students, companies and verification team
18. View analytics
19. Generate reports
20. Download report as pdf and csv file
21. Application settings -> Add, delete and edit reasons for jobs activate, deactivate, reject
Add new industry types
22. View profile
23. Receive notifications for->
New user and job postings to verify
Messages from admin, student and verification team
Complaints about jobs

Verification team member

1. Login
2. Forgot password
3. Change password
4. Deactivate account
5. Verify users
6. Verify jobs and internships
7. Send messages to admin
8. View profile
9. Receive notifications about -> Messages from admin
New user and job postings to verify

Extra (Common) functionalities/common features

1. Home page
2. Pagination
3. Flash message for important functionalities
4. Add tooltips

We're very happy to say that we've completed 100% of the project from the project proposal action plan we've submitted. And additional to them we've implemented some extra features as well.

The only we haven't completed is viewing a jobs calendar because that part we've thought to merge to the notifications system.

5.3. Each member's contribution.

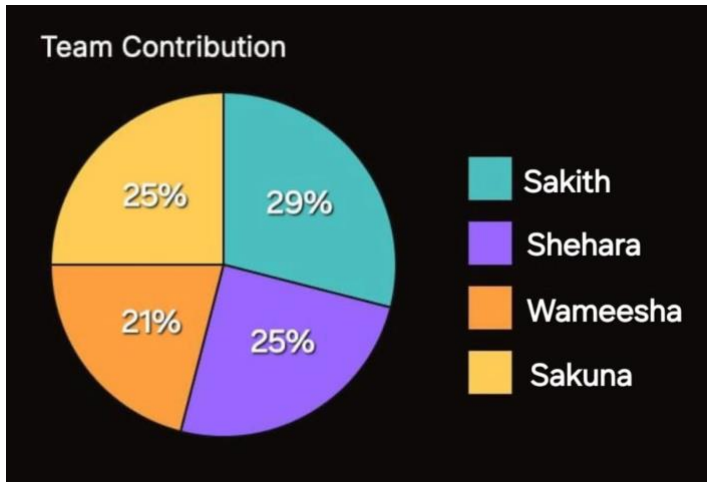

Throughout the working process it's happy to say that every member contributed at their best.

(L) - Low priority tasks.

(M) - Medium priority tasks.

(H) - High priority tasks.

Sakuna	Sakith	Shehara	Wameesha
Make reviews anonymous (L)	Login, register, forgot pw (H)	Apply for jobs, internships (L)	View jobs, internships and companies (M)
Like, dislike reviews (M)	Set search and filters and sorting (M)	View application (L)	Messaging system (H)

5.4. Test Cases

5.4.1. Test cases of Sakith

1. Login page

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
01	Login with correct credentials (Active user)	01	UniQuest Login page is loaded	Enter registered mail and its correct password	It successfully signs into relevant dashboard due to role	It signs into dashboard	Pass
	Login with correct credentials (Pending user)	02	UniQuest Login page is loaded	Enter valid credentials of a Pending user	User pending approval popup is shown	User pending approval popup is shown	Pass
	Login with correct credentials (Not Approved user)	03	UniQuest Login page is loaded	Enter valid credentials of a Not Approved user	User Not approved popup is shown	User Not approved popup is shown	Pass

	Login with correct credentials (Pending Deletion user)	04	UniQuest Login page is loaded	Enter valid credentials of a Pending Deletion user	Redirects to account reactivation page	Redirects to account reactivation page	Pass
	Login with incorrect password	05	UniQuest Login page is loaded	Enter registered mail and wrong password	It displays an error "Incorrect password"	It displays an error "Incorrect password"	Pass
	Login with unregistered email	06	UniQuest Login page is loaded	Enter not registered mail and a random password	It displays an error "No user found"	It displays an error "No user found"	Pass
	Login with unverified email	07	UniQuest Login page is loaded	Enter valid credentials of unverified email	Redirects to email verification page	Redirects to email verification page	Pass
	Login with empty email and/or password	08	UniQuest Login page is loaded	Do not enter any detail and login	It displays "please fill out this field"	It displays "please fill out this field"	Pass
	Login with invalid email	09	UniQuest Login page is loaded	Enter random text to email and a random password	It displays "please include email address with @ sign"	It displays "please include email address with @ sign"	Pass

2. Verify company email

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
02	Send Verification Email with Valid Email	01	UniQuest verify email page is loaded	Enter a valid unregistered email and submit	Sends email with token and redirects to Email Sent page	Sends email with token and redirects to Email Sent page	Pass
	Send Verification Email with Already Registered Email	02	UniQuest verify email page is loaded	Enter an already registered email and submit	It displays an error "User found with that email address"	It displays an error "User found with that email address"	Pass
	Send Verification Email with Invalid Email Format	03	UniQuest verify email	Enter random text	It displays "please include email address with @ sign"	It displays "please include email address with @ sign"	Pass

			page is loaded	to email and submit	email address with @ sign"	address with @ sign"	
	Verify Email with Valid Token	01	Verification email is received with a token	Click email link	Verifies email and redirects to company registration page with preload email	Verifies email and redirects to company registration page with preload email	Pass
	Verify Email with Expired Token	02	Verification email is received with a token	Click email link	Redirects to email verify page with error "Token expired"	Redirects to email verify page with error "Token expired"	Pass
	Verify Email with Invalid Token	03	Verification email is received with a token	Click email link	Redirects to email verify page with error "Invalid token"	Redirects to email verify page with error "Invalid token"	Pass

3. Company registration

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
03	Company Registration with Valid Inputs	01	Uniquet company registration page is loaded with verified email	Fill form correctly with valid data and submit	System registered the company and redirect to the login page	System registered the company and redirect to the login page	Pass
	Company Registration with Missing Mandatory Fields	02	Uniquet company registration page is loaded with verified email	Leave some mandatory fields empty and submit	System shows relevant validation errors for missing fields	System shows relevant validation errors for missing fields	Pass
	Company Registration with invalid data	03	Uniquet company registration page is loaded with verified email	Fill form with some invalid data	System shows relevant validation errors for invalid data	System shows relevant validation errors for invalid data	Pass
	Accessing company registration	04	Email is not verified	Access url directly from browser	Redirects to send	Redirects to send verification email page	Pass

	without verifying email				verification email page		
--	-------------------------	--	--	--	-------------------------	--	--

4. Verify student email

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
04	Send verification email with valid university email	01	UniQuest verify email page is loaded	Enter a valid university email address and submit	Sends email with token and redirects to Email Sent page	Sends email with token and redirects to Email Sent page	Pass
	Send verification email with non-university email	02	UniQuest verify email page is loaded	Enter a non-university email (like Gmail) and submit	It displays an error "Please enter a valid university email address"	It displays an error "Please enter a valid university email address"	Pass
	Send Verification Email with Already Registered Email		UniQuest verify email page is loaded	Enter an already registered email and submit	It displays an error "User found with that email address"	It displays an error "User found with that email address"	Pass
	Send Verification Email with Invalid Email Format	03	UniQuest verify email page is loaded	Enter random text to email and submit	It displays "please include email address with @ sign"	It displays "please include email address with @ sign"	Pass
	Verify Email with Valid Token	01	Verification email is received with a token	Click email link	Verifies email and redirects to student registration page with preload email and university	Verifies email and redirects to student registration page with preload email and university	Pass
	Verify Email with Expired Token	02	Verification email is received with a token	Click email link	Redirects to email verify page with error "Token expired"	Redirects to email verify page with error "Token expired"	Pass
	Verify Email with Invalid Token	03	Verification email is received with a token	Click email link	Redirects to email verify page with error "Invalid token"	Redirects to email verify page with error "Invalid token"	Pass

5. Student registration

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
05	Student Registration with Valid Inputs	01	Uniquet student registration page is loaded with verified email and university	Fill form correctly with valid data and submit	System registered the student and redirect to the login page	System registered the student and redirect to the login page	Pass
	Student Registration with Missing required Fields	02	Uniquet student registration page is loaded with verified email and university	Leave some required fields empty and submit	System shows relevant validation errors for missing fields	System shows relevant validation errors for missing fields	Pass
	Student Registration with invalid data	03	Uniquet student registration page is loaded with verified email and university	Fill form with some invalid data	System shows relevant validation errors for invalid data	System shows relevant validation errors for invalid data	Pass
	Student Registration with missing required files		Uniquet student registration page is loaded with verified email and university	Leave some required files empty and submit	System shows relevant validation errors for missing fields	System shows relevant validation errors for missing fields	Pass
	Student Registration with invalid file types		Uniquet student registration page is loaded with verified email	Fill form with valid data and upload invalid file type	It displays an error "Please upload valid file types"	It displays an error "Please upload valid file types"	Pass

			and university				
	Accessing student registration without verifying email	04	Email is not verified	Access url directly from browser	Redirects to send verification email page	Redirects to send verification email page	Pass

6. Forgot Password

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
06	Submit forgot password form with a valid registered email	01	Uniquet forgot password page is loaded	Enter a valid registered email address and submit	Sends email with reset link and redirects to Email Sent page	Sends email with reset link and redirects to Email Sent page	Pass
	Submit forgot password form with an unregistered email	02	Uniquet forgot password page is loaded	Enter a valid unregistered email address and submit	It displays an error "No user found with that email address"	It displays an error "No user found with that email address"	Pass
	Submit forgot password form with an invalid email format	03	Uniquet forgot password page is loaded	Enter random text to email and submit	It displays "please include email address with @ sign"	It displays "please include email address with @ sign"	Pass
	Submit reset form with valid password and matching confirm password with valid token	04	Password reset email received with token	Enter strong matching password and submit	Password reset successfully and redirect to login page	Password reset successfully and redirect to login page	Pass
	Submit reset form with password and unmatched confirm password		Password reset email received with token	Enter strong different password and submit	It displays "Passwords do not match" error	It displays "Passwords do not match" error	Pass

	Submit reset form with weak password		Password reset email received with token	Enter week password and submit	It displays "Password must be at least 8 characters..." validation error	It displays "Password must be at least 8 characters..." validation error	Pass
	Open reset password link with invalid token	05	Password reset email received with token	Click on password reset link	It displays an error "Token invalid"	It displays an error "Token invalid"	Pass
	Open reset password link with expired token	06	Password reset email received with token	Click on password reset link	It displays an error "Token expired"	It displays an error "Token expired"	Pass

7. Change Password

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
07	Change Password with Valid Inputs	01	Uniquet change password popup is loaded	Fill current password correctly, set a strong new password and confirm it correctly, then submit	Password changed successfully user is logged out and redirected to login page	Password changed successfully user is logged out and redirected to login page	Pass
	Change Password with Incorrect Current Password	02	Uniquet change password popup is loaded	Enter wrong current password and submit	System shows "Current password is incorrect" error	System shows "Current password is incorrect" error	Pass
	Change Password with Weak New Password	03	Uniquet change password popup is loaded	Enter a weak new password and submit	System shows "Password must be at least 8 characters..." validation error	System shows "Password must be at least 8 characters..." validation error	Pass
	Change Password with Mismatched Confirm Password	04	Uniquet change password popup is loaded	Enter different new password and confirm password	System shows "Passwords do not match" error	System shows "Passwords do not match" error	Pass

8. Add verification member

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to execute	Expected result	Actual Result	Status
08	Add Member with Valid Inputs	01	Admin is logged in and add member page loaded	Fill all required fields with valid data and upload valid profile picture, then submit	Member added successfully and redirected to verification team management page	Member added successfully and redirected to verification team management page	Pass
	Add Member with Already Registered Email	02	Admin is logged in and add member page loaded	Enter an email that is already registered and submit	System shows "Email verification failed" error	System shows "Email verification failed" error	Pass
	Add Member with Missing Required Fields	03	Admin is logged in and add member page loaded	Leave required fields empty and submit	System shows relevant validation errors for each missing fields	System shows relevant validation errors for each missing field	Pass
	Add Member with Password Mismatch	04	Admin is logged in and add member page loaded	Enter different password and confirm password and submit	Enter different password and confirm password and submit	Enter different password and confirm password and submit	Pass

5.4.2. Test cases of Sakuna

1. Like & Dislike System

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
09	Like a review	1	User logged in, review exists	Go to a review and click the like button if not already liked.	"Like added successfully!"	As expected	Pass
	Remove like from review	2	Review previously liked	Go to a review and click the like button if already liked.	"Like removed successfully!"	As expected	Pass
	Dislike a review	3	User logged in, review exists	Go to a review and click the dislike button if not already disliked.	"Dislike added successfully!"	As expected	Pass
	Remove dislike from review	4	Review previously disliked	Go to a review and click the dislike button if already disliked.	"Dislike removed successfully!"	As expected	Pass

2. Bookmark Jobs

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
10	Bookmark a job	1	User logged in, job exists	Go to jobs page and click bookmark icon.	"Bookmark added successfully!"	As expected	Pass
	Remove bookmarked job	2	Job previously bookmarked	Go to jobs page and click bookmark icon.	"Bookmark removed successfully!"	As expected	Pass

3. Notification System

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
11	Mark all notifications as read	1	User has unread notifications	Go to notifications dropdown by clicking notifications icon and click "Mark All as Read"	All notifications marked as read and remove the notification count.	As expected	Pass
	Mark single notification as read	2	User has at least 1 unread notification	Go to notifications dropdown by clicking notifications icon and click "Mark as Read"	The clicked notification is marked as read.	As expected	Pass
	Fetch recent notifications	3	Notifications exist	Click on the notifications icon.	The most recent 5 notifications will display in the dropdown.	As expected	Pass

	Fetch all notifications	4	Notifications exist	Click on "See All Notifications" in the notifications dropdown.	All the notifications will displayed in the dropdown.	As expected	Pass
	Send notifications	5	The relevant function is successfully done.	A notification is sent to the particular user.	Notification created with link to the relevant notification if a link exist.	As expected	Pass

4. Trending companies

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
12	Test company ratings calculation	4	Reviews with ratings ≥ 4 in last week and review count must be ≥ 10 .	1. Fetch trending companies. 2. Verify average ratings.	Correct average ratings rounded to two decimal places.	Correct average ratings rounded to two decimal places.	Pass
	Check response when no trending companies exist	5	No companies matching trending criteria	1. Remove all trending companies. 2. Check response.	No companies returned.	No companies returned.	Pass

5. Analytics

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
13	Fetch analytics when company subscription is valid.	1	Active subscription.	Go to analytics page.	Analytics data displayed successfully.	Analytics data displayed successfully.	Pass
	Subscription expired - block access to analytics.	2	Expired subscription.	Go to analytics page.	Flash message displayed saying it's a premium feature.	Flash message displayed saying it's a premium feature.	Pass

5. Add custom fields and set required fields.

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
14	Fetch required field configuration.	1	At least 1 field must be selected as required.	1. Fetch fields. 2. Verify required flags.	Required fields marked properly.	As Expected	pass
	Custom fields mapping.	2	Job has custom fields.	1. Fetch fields. 2. Verify mapping.	Custom fields mapped properly.	As Expected	Pass

6. Set the premium features

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
15	Free (Starter) plan user posts third job	TC001	Free plan with 2 jobs already posted	Try posting third job	Error message displayed: "Upgrade to Professional to post more jobs."	As Expected	Pass
	Professional plan user posts sixth job	TC002	Professional plan with 5 jobs posted	Try posting sixth job	Error message displayed: "Upgrade to Enterprise to post more jobs."	As Expected	Pass
	Student tries to apply for free user's job	TC003	Free plan, one job posted with already 20 applications	Try to apply for 21st application	Error shown: "Application limit reached for this job."	As Expected	Pass
	Student tries to apply for professional user's job	TC004	Free plan, one job posted with already 50 applications	Try to receive 51st application	Error shown: "Application limit reached. Upgrade plan."	As Expected	Pass

	Enterprise plan user posts unlimited jobs	TC005	Enterprise plan active	Post multiple job listings (>5)	Jobs should be posted without any limit warning	As Expected	Pass
	Professional plan user generates job report	TC006	Professional plan active	Go to analytics → Generate job report	Report is generated successfully	As Expected	Pass
	Enterprise plan user generates job report	TC007	Enterprise plan active	Go to analytics → Generate job report	Report is generated successfully	As Expected	Pass
	Starter plan user tries to generate job report	TC008	Starter plan active	Try accessing analytics/report	Error message displayed: "Upgrade to premium plan to access this feature."	As Expected	Pass
	Professional plan user edits active job	TC009	Professional plan active, job published	Try to edit active job	Editing allowed successfully	As Expected	Pass
	Starter plan user tries to edit active job	TC010	Starter plan active, job published	Try to edit active job	Editing not allowed, upgrade prompt shown	As Expected	Pass
	Prioritize enterprise users job posts	TC011	Enterprise plan active, job posted		Enterprise users jobs arrives top on the list	As Expected	Pass

7. Make complaint

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Status
16	Make a complaint with valid details	1	User logged in, job exists	1. Open Make Complaint form. 2. Fill complaint text. 3. Upload a valid proof file. 4. Submit form.	Complaint is created, admins are notified, user is redirected to jobs page.	Pass
17	Submit complaint form without complaint text	2	User logged in, job exists	1. Open Make Complaint form. 2. Leave complaint text empty. 3. Upload a valid proof file. 4. Submit form.	Error shown: "Please fill in this field"	Pass
18	Submit complaint form without proof file	3	User logged in, job exists	1. Open Make Complaint form. 2. Enter complaint text. 3. Do not upload proof file. 4. Submit form.	Error shown: "Please upload a proof file."	Pass

19	Submit complaint when a complaint already exists for the job	4	Existing complaint submitted earlier for same job	1. Open Make Complaint form for same job. 2. System detects existing complaint.	User is redirected back with a message (existing complaint).	Pass
20	Upload invalid proof file (e.g., too large or wrong format)	5	User logged in, job exists	1. Open Make Complaint form. 2. Enter complaint text. 3. Upload invalid proof file. 4. Submit form.	Error message from upload File returned; form not submitted.	Pass

5.4.3. Test cases of Shehara

1. Job Posting

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
21	Free plan company posting 1st job	1	Company logged in, Free plan, 0 jobs posted	Go to job post page → Fill valid data → Submit	Job posted successfully → Redirect to pending_jobs	As expected	Pass
	Free plan company posting 3rd job (limit = 2)	2	Company logged in, Free plan, already posted 2 jobs	Go to job post page → Try submitting new job	Redirected to /premium with error session set	As expected	Pass
	Professional company posting 6th job (limit = 5)	3	Company logged in, Professional plan, 5 jobs already posted	Submit a 6th job post	Redirected to /premium with error session set	As expected	Pass
	Enterprise company posting job (no limit)	4	Company logged in, Enterprise plan	Go to job post → Submit a valid job	Job successfully posted	As expected	Pass
	Not logged in user tries to access job post page	5	User not logged in	Access jobPost URL directly	Redirect to login or dashboard	As expected	Pass

	Company selects invalid publish date (earlier than 2 days)	6	Logged in with valid plan	Fill form with publish date = today	Error: "Date cannot be earlier than 2 days from today"	As expected	Pass
	Company selects publish date > 30 days in future	7	Logged in with valid plan	Fill form with publish date = today + 30 days	Error: "Date cannot be more than 30 days in the future"	As expected	Pass
	Submit job with empty job name	8	Logged in company	Leave job name empty → Submit	Show "Please enter job name" error	As expected	Pass
	Submit job without selecting district and city	9	Logged in company	Leave district/city empty → Submit	Show "Please select district and city" error	As expected	Pass
	Submit valid job with optional city preloaded dynamically	10	Logged in company	Select district → Cities should populate → Submit valid job	Job successfully submitted	As expected	Pass
	Save application fields after posting	11	Logged in company	Post a job → Add custom fields → Submit	saveFields() called, fields stored	As expected	Pass
	System sets session for flash message on successful post	12	Logged in company	Post valid job	\$_SESSION['job_send_to_verify'] is set	As expected	Pass

	Job creation fails internally (DB fail)	13	Simulate DB error	Post valid job	Show error → "something went wrong"	As expected	Pass
--	---	----	-------------------	----------------	-------------------------------------	-------------	------

2. Edit Job Postings

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
22	Update a job post with valid data	1	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Fill out the form with valid job details 3. Submit the form	Job should be successfully updated, and the user should be redirected to the previous page or dashboard with a success message.	Job updated successfully and redirected	Pass
	Attempt to update job without job name	2	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Leave the "Job Name" field empty 3. Submit the form	Error message "Please enter job name" should be displayed for the "Job Name" field	"Please enter job name" error displayed	Pass

	Attempt to update job with missing required location	3	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Leave the "Job District" and "Job City" fields empty 3. Submit the form	Error message "Please enter job location" should be displayed for missing location	"Please enter job location" error displayed	Pass
	Attempt to update job with non-numeric salary range	4	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Enter non-numeric value for salary range (e.g., "Fifty Thousand") 3. Submit the form	Error message "Please enter a valid salary range" should be displayed	"Please enter a valid salary range" error displayed	Pass
	Update job post with missing job description	5	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Leave the "Job Description" field empty 3. Submit the form	Error message "Please enter description" should be displayed for missing job description	"Please enter description" error displayed	Pass
	Try to edit a job post that is not owned by the user	6	Logged in company with no ownership of the job post	1. Attempt to access the "Edit Job" page for a job post that does not belong to the logged-in company 2. Observe redirection behavior	User should be redirected to the "student/jobs" page due to lack of permission and free subscription plan	User redirected to the correct page	Pass

	Attempt to edit a published job with a "free" subscription plan	7	Logged in company with a "free" subscription plan	1. Navigate to the "Edit Job" page for a job that has already been published 2. Submit the form	User should be redirected to the previous page with an error indicating that free plans cannot edit published jobs.	User redirected with error	Pass
	Attempt to edit job without required POST data	8	Logged in company with access to the job post	1. Navigate to the "Edit Job" page 2. Submit the form with missing data (e.g., job name, location, etc.)	The system should validate the form and return appropriate error messages for each missing field (e.g., "Please enter job name," "Please enter job location").	Form validation works correctly with error messages	Pass
	Invalid post ID (job not found)	9	Invalid job post ID	1. Attempt to access the "Edit Job" page using an invalid job post ID (non-existent job)	System should show an error message or handle the case gracefully without attempting to edit a non-existent job.	Error handled gracefully	Pass
	Error in database when editing job	10	Logged in company with valid job post to edit	1. Submit the form with valid data. 2. Simulate a database error (e.g., simulate a failure in <code>M_jobpost->edit()</code>)	System should display an error message: "Something went wrong" and not attempt to redirect the user to the next page.	Error message displayed and user remains on the page	Pass

3. Delete Job Post Functionality

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
23	Delete job post with valid user and post ID	1	Logged-in company with access to the job post	1. Navigate to the "Delete Job" page 2. Click on the delete button for a valid job post 3. Submit the delete request (POST)	Job post should be successfully deleted, and the user should be redirected to the "active_jobs" page with a success message ("Post is deleted").	Post deleted successfully and redirected	Pass
	Attempt to delete a job post when user is not the owner	2	Logged-in company that does not own the job post	1. Try to access the "Delete Job" page for a job post that does not belong to the logged-in company 2. Observe redirection behavior	User should be redirected to the "student/jobs" page because they do not own the job post.	User redirected to "student/jobs"	Pass

	Attempt to delete job post with a non-existent post ID	3	Invalid or non-existent job post ID	1. Attempt to delete a job post using an invalid post ID (non-existent job)	System should handle the invalid ID gracefully, possibly displaying an error message or redirecting the user without trying to delete a non-existent job.	Error handled gracefully	Pass
	Attempt to delete job post when delete operation fails in database	4	Logged-in company with access to the job post	1. Navigate to the "Delete Job" page 2. Simulate a database error (e.g., failure in M_jobpost->deletePost()) 3. Submit the delete request	System should display an error message such as "Something went wrong" and not attempt to redirect the user to the next page.	Error message displayed and user remains on the page	Pass
	Try to delete a job post with invalid POST request (non-POST method)	5	Logged-in company with access to the job post	1. Try to access the "Delete Job" action via GET or any non-POST method	The system should either redirect the user or show an error indicating that the "Delete" action requires a POST request.	Error or redirection for invalid method	Pass

	Delete a job post after session has expired	6	Logged-in session expired or no session available	1. Try to delete a job post after the session has expired or when the user is logged out	User should be redirected to the login page or session error page, preventing job deletion.	User redirected to login page or session error	Pass
--	---	---	---	--	---	--	------

4. Application customize with standard fields

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
24	Save standard field: Full Name enabled	1	Job ID exists	1. Set app_fullname = true. 2. Call saveFields. 3. Verify in DB.	Full name saved as true for the job.	As Expected	Pass
	Save standard field: Photo enabled	2	Job ID exists	1. Set app_photo = true. 2. Call saveFields. 3. Verify in DB.	photo saved as true for the job.	As Expected	Pass
	Save standard field: Email enabled	3	Job ID exists	1. Set app_email = true. 2. Call saveFields. 3. Verify in DB.	email saved as true for the job.	As Expected	Pass
	Save standard field: Contact Number enabled	4	Job ID exists	1. Set app_contact = true. 2. Call saveFields. 3. Verify in DB.	contact saved as true for the job.	As Expected	Pass
	Save standard field: Address enabled	5	Job ID exists	1. Set app_address = true. 2. Call saveFields. 3. Verify in DB.	address saved as true for the job.	As Expected	Pass

	Save standard field: NIC Number enabled	6	Job ID exists	1. Set app_nic = true. 2. Call saveFields. 3. Verify in DB.	nic saved as true for the job.	As Expected	Pass
	Save standard field: NIC Copy enabled	7	Job ID exists	1. Set app_nic_copy = true. 2. Call saveFields. 3. Verify in DB.	nic_copy saved as true for the job.	As Expected	Pass
	Save standard field: Gender enabled	8	Job ID exists	1. Set app_gender = true. 2. Call saveFields. 3. Verify in DB.	gender saved as true for the job.	As Expected	Pass
	Save standard field: Date of Birth enabled	9	Job ID exists	1. Set app_dob = true. 2. Call saveFields. 3. Verify in DB.	dob saved as true for the job.	As Expected	Pass
	Save standard field: Qualifications enabled	10	Job ID exists	1. Set app_qualifications = true. 2. Call saveFields. 3. Verify in DB.	qualifications saved as true for the job.	As Expected	Pass
	Save standard field: Experience enabled	11	Job ID exists	1. Set app_experience = true. 2. Call saveFields. 3. Verify in DB.	experience saved as true for the job.	As Expected	Pass
	Save standard field: Skills enabled	12	Job ID exists	1. Set app_skills = true. 2. Call saveFields. 3. Verify in DB.	skills saved as true for the job.	As Expected	Pass
	Save standard field: CV enabled	13	Job ID exists	1. Set app_cv = true. 2. Call saveFields. 3. Verify in DB.	cv saved as true for the job.	As Expected	Pass

	Save standard field: LinkedIn enabled	14	Job ID exists	1. Set app_linkedin = true. 2. Call saveFields. 3. Verify in DB.	linkedin saved as true for the job.	As Expected	Pass
--	---------------------------------------	----	---------------	--	-------------------------------------	-------------	------

5. Job Application Form Functionality

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
25	User applies for a job for the first time	1	User is logged in and has not applied for the job yet	1. Navigate to the job application page 2. User has not applied yet 3. Submit the job application form	User should be able to successfully apply for the job, and the application should be saved in the database. The user should be redirected with a success message.	Application submitted successfully	Pass
	User has already applied for a part-time job	2	User has already applied for a part-time job	1. Navigate to the job application page for a part-time job 2. Check if the user has already applied 3. Attempt to reapply	User should be redirected to the previous page with an error message indicating that they cannot apply again for this part-time job.	Error message: Cannot apply again for part-time job	Pass

	User has already applied for an internship job	3	User has already applied for an internship job	1. Navigate to the job application page for an internship job 2. Check if the user has already applied 3. Attempt to reapply	User should be redirected to the previous page with an error message indicating that they cannot apply again for this internship job.	Error message: Cannot apply again for internship job	Pass
	User is not logged in	4	User is not logged in	1. Navigate to the job application page 2. Check if the user is logged in 3. Try to access the application form	User should be redirected to the login page or a message indicating that they need to log in to apply for jobs.	Redirected to login page or message displayed	Pass
	User tries to apply for a job that doesn't exist	5	Invalid job ID or non-existent job	1. Try to access the job application page with a non-existent job ID	User should be redirected to a valid job listing or an error page indicating that the job does not exist.	Error page or valid job listing	Pass
	Job application form displays the correct fields and data	6	User is logged in and a job exists	1. Navigate to the job application form 2. Verify that all application fields, job details, and user information are correctly loaded	All relevant fields (job details, application fields, etc.) should be displayed correctly, and user information should be pre-populated.	All fields and data displayed correctly	Pass

	Application count for a job is displayed correctly	7	User is logged in and job has application count	1. Navigate to the job application page 2. Verify that the application count for the job is displayed correctly	The number of applications for the job should be displayed correctly.	Application count displayed correctly	Pass
	Verify that a user is redirected with the correct error message if they cannot apply	8	User is logged in but has already applied for the job	1. Navigate to the job application page 2. Verify that the user has already applied 3. Observe the redirection and error message	User should be redirected with a specific error message that prevents them from applying again, depending on job category (Part-time or Internship).	Correct error message displayed	Pass

6. Application Dashboard

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
26	Logged-in company views application dashboard	1	Company logged in with valid session	Go to application dashboard	View loads with list of jobs and application stats	As expected	Pass
	Company with no jobs posted	2	Company logged in, no jobs posted	Access application dashboard	Empty jobs list displayed with "no applications found" message	As expected	Pass

	Company has jobs but no applications yet	3	Company posted jobs but no one applied	Open dashboard	Job titles shown, stats all 0	As expected	Pass
	Company has jobs with mixed application statuses	4	Company has jobs with accepted, rejected, pending apps	Open dashboard	Stats count for each status is correct	As expected	Pass
	Pagination shows first page of results	5	Many job applications exist	Access dashboard with ?page=1&limit=5	First 5 job applications shown with proper stats	As expected	Pass
	Company tries to access without being logged in	6	No session user_id	Access dashboard	Redirect to login or access denied	As expected	Pass
	Application data includes unexpected status (e.g. "Withdrawn")	7	Application with custom status exists	Load dashboard	Status ignored from stats (optional: counted separately if logic is updated)	As expected	Pass
	Application PublishDate is in invalid format	8	DB has corrupt date in PublishDate	Access dashboard	System handles gracefully, or default/invalid date shown	As expected or with error handling	Pass
	Application data fetched from model correctly	9	Valid company and DB data exist	Use debug/log to confirm getAllApplicationsByCompanyId() returns correct info	Data populated in \$jobs	As expected	Pass

	View correctly receives processed job stats array	10	Use debugging tool	Check passed \$data['jobs'] in view file	Correct data structure and values	As expected	Pass
--	---	----	--------------------	--	-----------------------------------	-------------	------

7. Subscription plan activate

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
27	Access Premium Features page	1	Company user logged in	1. Try to access a premium feature.	Page loads with company subscription info	As expected	Pass
	Log incoming PayHere request	2	PayHere sends POST request	1. Send test POST data to /premium_pro endpoint	Request logged in payhere_notify.log	As expected	Pass
	Verify signature with valid MD5 hash	3	POST request with valid data	1. Send PayHere request with correct signature	Signature passes validation	As expected	Pass
	Reject request with invalid signature	4	POST request with invalid MD5	1. Modify md5sig and POST 2. Submit to endpoint	Signature validation fails, no action taken	As expected	Pass

	Handle payment success with status_code = 2	5	Valid PayHere data & payment exists	1. Send successful payment POST 2. Check DB	Subscription updated, payment logged, pending cleared	As expected	Pass
	Ignore non-successful payment (status_code != 2)	6	POST request with status_code ≠ 2	1. Send POST with status_code = 0 or 1	No DB updates made	As expected	Pass
	Handle missing pending payment record	7	Order ID does not match DB	1. Send valid POST with unknown order_id	No subscription or payment updates	As expected	Pass
	Store successful payment details	8	Valid payment POST	1. Send POST 2. Check DB for stored payment info	Payment saved in DB	As expected	Pass
	Clear pending payment after success	9	Valid payment POST	1. Send POST 2. Check DB for pending entry	Pending payment removed	As expected	Pass
	Endpoint returns HTTP 200 always	10	Any POST request	1. Submit POST with any data	HTTP response is 200 OK	As expected	Pass

8. Create job report

Scenario ID	Scenario Description	Test Case ID	Pre-Condition	Steps to Execute	Expected Result	Actual Result	Status
28	View job report with valid jobId and valid data	1	User is logged in as a Professional/Enterprise company	1. Access /jobReport/{jobId} with a valid ID 2. Job has report data	Report view loads with job analytics	As expected	Pass
	Access job report with invalid/missing jobId (Optional validation)	2	None	1. Access /jobReport/abc or leave jobId empty	Redirects to ongoing_jobs (if validation is re-enabled)	As expected	Pass
	Prevent report access for Free plan user	3	User is a Free plan company	1. Access /jobReport/{jobId}	Redirect to dashboard with error message	As expected	Pass
	Handle missing report data	4	Job ID is valid but no data found	1. Access /jobReport/{jobId} with no data	Redirect with flash error	As expected	Pass
	Show total applicants and application rate	5	Valid job ID with report data	1. Open report page	Page displays correct applicant count and rate	As expected	Pass
	Show demographics if available	6	Job report contains demographics	1. View job report page	Demographic breakdown appears	As expected	Pass
